

Boluwatife Oladele

Full-Stack Engineer

techdevtea@gmail.com · +234 805 161 4609 · Lagos/Ibadan, Nigeria

linkedin.com/in/oladele-boluwatife-11ab32245 · github.com/teafeh

TECHNICAL SKILL

Languages: JavaScript (ES6+) · Python · C# · PHP · HTML5 · CSS3 · SQL

Backend & DBs: Node.js · Express.js · FastAPI · REST API Design · Webhook Architecture · MongoDB · PostgreSQL · MySQL · Firebase

Frontend & UI: React.js · React Native · Electron · Tailwind CSS · Responsive Design · Figma · Webflow

AI & Automation: LLM Workflow Engineering · Gemini API · ChatGPT API · Zapier · Prompt Engineering

Integrations & Tools: HubSpot · Apollo.io · Twilio · Telegram Bot API · Git · GitHub · Postman · Agile/Scrum

WORK EXPERIENCE

Backend Developer — CoBuild Innovation Program

ILLUMITRUST · Wema Bank Fintech Project | Feb 2026 – Present | Nigeria

- Selected into Wema Bank's CoBuild Innovation Program as part of ILLUMITRUST following the team's 2nd-place finish at Hackaholics 6.0 Grand Finale (Lagos, Dec 2025).
- Serving as Backend Developer on a mapping solution for Wema Bank, currently at final presentation stage with active stakeholder collaboration.
- Upskilled in C# and SQL for backend development, API integration, and database operations in a structured fintech environment.
- Contributing to identity verification workflows (liveness detection), collaborating cross-functionally with developers, designers, and bank stakeholders.

AI Automation Engineer & Data Specialist (Contract)

Clinton AI, formerly TCC (The Clinton Consultancy) | Jul 2025 – Present | Remote — UK

- Engineered a high-volume AI image-generation pipeline using **Zapier** and the **Gemini API**, reducing content production time by 99% and enabling same-day asset delivery at scale.
- Curated, structured, and validated a 2,500+ record industry dataset using advanced **Google Sheets automation** to accelerate downstream LLM training pipelines.
- Architected end-to-end lead management and CRM workflows integrating **HubSpot**, **Apollo.io**, and **Twilio** to automate email sequencing, voice triggers, and data hygiene for global client accounts.
- Built AI-powered contract onboarding flows utilizing LLMs to auto-generate custom legal documents (SOW/MSA) and trigger downstream workflows, eliminating ~8 hours/week of manual administration.

- Managed targeted B2B community growth and content strategy for internal e-commerce AI products across Twitter/X, Reddit, and YouTube to drive direct platform adoption.

Web Development Tutor

SQI College of ICT | Aug 2025 | Ibadan, Nigeria

- Delivered project-first instruction in HTML, CSS, JavaScript, and introductory AI to cohorts of 20+ students.
- Guided students from zero experience to deployed real-world applications, improving course completion rates and technical confidence.

Frontend Developer (Intern to Graduate)

Verstronet IT Solutions | Apr 2024 – Jan 2025 | Abuja, Nigeria

- Built responsive, component-based UI applications in React.js, JavaScript, HTML, and CSS — recognised for code quality and rapid skill advancement.
- Delivered multiple client-facing web applications on schedule using component architecture best practices

PROJECTS

OasisFunds API (Core Financial Engine): Engineered a high-performance investment backend utilizing a dual-database strategy (**PostgreSQL** for strict ACID-compliant transaction ledgers and **MongoDB** for flexible user profiles and KYC data).

- Built an automated **Daily ROI Engine** using scheduled cron tasks and transactional database updates to handle multi-tier wallet balance distribution and 3% referral commissions seamlessly.
- Implemented a high-security **Daily Wallet Rotation system** using date-based server logic alongside decoupled JWT authorization layers (User vs. Admin) to completely eliminate privilege escalation risks.

[Github Link](#)

MovieRate (Full-Stack Movie Platform): Architected a decoupled system using a **FastAPI** REST backend and a **React** SPA; optimized read performance by implementing atomic database-level write hooks to denormalize review aggregates ($O(1)$ read delivery), integrated secure JWT token-based authentication, and achieved full test coverage with **Pytest** and **React Testing Library**.

[Github Link](#)

Project Manager (Git-Backed Mobile CMS): Architected a decoupled idea-tracking platform utilizing a React Native frontend and a Node.js backend. Transformed GitHub into a zero-cost, version-controlled database by integrating the Octokit REST API to dynamically generate and commit structured Markdown files, and engineered a cloud asset pipeline using Cloudinary to handle multipart image uploads seamlessly.

[Github Link](#)

CleanPilot (Smart Desktop File Cleaner): Architected an offline-first, system-level desktop application using Electron, React, and Vite to scan storage directories and optimize local disk space.

Engineered a high-performance recursive directory scanner with custom guardrails to skip development directories, and implemented a custom algorithmic rule engine that automatically matches file signatures to group redundant files into risk profiles. Integrated native Node.js file-system modules with Electron IPC communication channels and system Shell mechanisms to safely down-route user-approved maintenance assets directly to the platform's native recycling trash bin.

EDUCATION

Postgraduate Diploma (PGD) — Computer Science (In Progress)

Lead City University, Ibadan · 2026 – Present

Full-Stack Web Development Certification — MERN Stack SQI College of ICT, Ibadan · 2025

BSc — Animal & Environmental Biology

Federal University Oye Ekiti (FUOYE) · 2019 – 2024

CERTIFICATIONS

- NYSC Certificate of National Service — Year of Completion, 2026
- NYSC Certificate of Service — Charity & Welfare CDS (Treasurer), 2026
- Software Engineering Certification — SQI College of ICT, 2025
